### Overview

#### 1 Introduction

#### 2 Fundamental Concepts

- Kets, Bras and Operators
- Base kets and matrix representations
- Measurements, observables, and the uncertainty relations
- The uncertainty relation
- Change of Basis
- Position, Momentum, and Translation
- The density matrix

### Recommend Readings

#### Text Book:

J. J. Sakurai, *Modern Quantum Mechanics*, Cambridge University Press (3rd edition, 2020).

#### Additional reading materials:

1. P. A. M. Dirac, *Principles of Quantum Mechanics*.
2. Guang-Jong Ni and Su-Qing Chen, *Advanced Quantum Mechanics*, Fudan University Press. (In Chinese)
3. R. Shankar, *Principles of Quantum Mechanics*, Plenum Press.
4. Li Zhang and Molin Ge, *Frontier Problems in Quantum Mechanics*.

## The essence of quantum theory

The very notion of existence is changed:

- The existence is both **particles** and **waves**
  - The existence is neither **particles** nor **waves**
- ⇒ New quantum existence: particle-wave duality

- Particle at location  $|x_1\rangle$  or  $|x_2\rangle$  or ...

Superposition of different location states  $\sum_i \psi(x_i, t) |x_i\rangle$

## Wave function

$\psi(x, t)$ : **complex number** represents the **Wave function**

**Born's statistical interpretation of the wave function**

**probability density:**  $|\psi(x_i, t)|^2$  at position  $x_i$  and time  $t$

### Normalized property

$$\sum_i |\psi(x_i, t)|^2 = 1 \quad \text{or} \quad \int dx |\psi(x, t)|^2 = 1$$

⇒ Wave  $\psi(x, t) \propto e^{ikx - i\omega t}$ ,  $k \propto$  momentum ( $p = \hbar k$ ),  $\omega \propto$  energy ( $E = \hbar\omega$ )

The relation between  $\omega$  and  $k$  is named as the **dispersion relation**.

In **condensed matter physics**, the **dispersion relation** is also known as the **electronic band structure**.

The quantum mechanics is basic mathematical framework to describe the microscopic objects.

Advanced Quantum Mechanics: Lecture 2

Mengnan Chen

Department of physics

October 11, 2023

Navigation icons

Overview

- 1 Time Evolution and the Schrödinger Equation
  - Time Evolution Operator
  - Energy Eigenkets
  - Time Dependence of Expectation Values
- 2 Correlation Amplitude and the Energy-Time Uncertainty Relation
- 3 The Schrödinger Versus the Heisenberg Picture
  - Unitary Operators
  - The Heisenberg Equation of Motion
- 4 Construction of the path integral
  - Analytic continuation to imaginary time
- 5 The WKB Approximation
- 6 Potentials and Gauge Transformations
